

Aperio™ technology in London lawyer offices

ASSA ABLOY

The global leader in
door opening solutions

Aperio™ technology in London lawyer offices

"Aperio™ appealed to us because of its innovative design and ability to work with the security solution in place. We have found it really easy to install and operate, as access can be granted or denied instantly without the need for updating cards or visiting individual door locations."

Stuart House, Security Manager of PCL Whitehall

Company

Leading International Law Firm
Segment: Administration & Offices
Location: London

Access Control System: PLAN
Aperio™ Partner: ACS Limited (UK)
Aperio™ Devices: Electronic knob cylinders with Euro profile

Challenge

The London offices has recently undergone some refurbishment and at the same time security arrangements were reviewed. "There are many different factors to consider when looking at the security of such a prestigious solicitor's office. Not only is there the

need to accommodate daily activity of a significant number of staff and visitors, but also an ability to instantly update card access points is vital, for example with trainee solicitor's changing departments regularly.", said Ray Philips, Technical Sales Consultant of ACS Limited.

Solution

Following significant research by the security team and ACS Ltd. who provide the current PLAN access control system, Aperio™ electronic cylinders were found to be the most cost effective and easy to install solution without any need to modify the doors. Utilising the existing access control system in place based on Mifare RFID-

technology and not altering the doors in anyway, the installation costs are also minimised. To date, Aperio™ cylinders have been fitted on a variety of applications, including all IT cabinets, high security maintenance areas and offices.
